Do you know about "avatori"? The Japanese word "avatori" means playing by making various shapes with string. In Japan, some children enjoy ① shapes of things, for example, a river and a bridge. Last week, I joined a party to welcome some students from Australia. At the party, I introduced avatori. But they already knew how to make various shapes with string. One of such shapes was a fish shape. I saw the shape for the first time.

a bridge shape made with string

After the party, I read a book and learned that people in some areas in the world enjoy something like ayatori. They make many different shapes with string. Those shapes show things 2 are often seen in their everyday lives. In one area, people make a cloud shape with string. The weather there often changes, so I imagine they carefully look at clouds. In another area, people make a star shape with string. They know the direction, thanks to one bright star. I think watching stars is important for people there. By learning about various shapes people made with string, I could imagine a part of their lives.

Riko: Hi, Emma. What are you doing with your tablet?

Emma: Hi, Riko. I'm looking at some photos of snow crystals.

Riko: Oh, can I ① them?

Emma: Sure.

Riko: They look beautiful.

Takeo: Hi, Emma and Riko. What are you doing?

Riko: Hi, Takeo. Emma is showing me some photos of snow crystals on her tablet.

Emma: They were taken about 100 years ago.

Takeo: Oh, that's a long time ago. Let me see them.

Emma: Of course. An American man, Wilson Bentley, took those photos.

Have you heard about him?

Riko: 2 I don't know about him.

Takeo: I don't know about him, either.

Emma: I learned about him two years ago.

Riko: Tell us about him.

Emma: Sure. He lived in a small village in America. There, it snowed a lot in winter. When he was 15 years old, he got an old microscope. With that microscope, he saw many things in nature. One of <u>Athem</u> was a snow crystal.

Takeo: 3 Snow disappears quickly in a warm room.

Emma: You're right. To see the snow crystals, he used his microscope outside his house.

Riko: Wow. He was really interested in snow crystals.

Takeo: I think so, too.

Emma: When he saw them with his microscope, he found each snow crystal had a different shape. He thought every shape was beautiful.

**Takeo:** So, did he decide to take photos of snow crystals?

Emma: Yes. He wanted to show other people the various beautiful shapes of snow crystals. But, to take photos of them, he had some difficult things to do.

Riko: (4)

Emma: First, to take photos of very small things like snow crystals, he had to connect a camera to his microscope. Also, in those days, cameras didn't have high technology. So, he had to find a way to take clear photos with a camera without high technology. He tried many ideas such as changing some parts of the camera.

Riko: Sounds hard.

Emma: After trying for a few years, he could finally take clear photos of snow crystals.

Takeo: I see.

Emma: Through his life, he took more than 5,000 photos of snow crystals. His photo book about snow crystals was first printed in 1931 and was sold in many stores. I guess many people were excited when they saw the photos of snow crystals.

Takeo: OI agree. I think they were surprised at the beauty of snow crystals.

Riko: Now, I want to see more photos taken by Wilson Bentley. Thank you for telling me about him, Emma.

Takeo: From your story about him, I became more interested in snow crystals. Thank you, Emma.

Emma: You're welcome!
