

Technology × Local resources × Co-creation

Harmony between nature and city

1 Create hubs around stations and attractive living areas

- Concentrate urban functions in the station area along with its redevelopment
- Convert the area to comfortable space for people
- Develop an urban area along the railroad line
- Enrich the area by new mobility

Future vision of station space Image

2 Restore suburban residential areas for various generations to live, work, and enjoy cultural exchange

- Create core regional functions and (a comfortable working environment such as)co-working spaces
- Introduce new transportation systems (for smooth travel)
- Encourage agriculture as well utilizing the surrounding rural environment

Future Vision of New Town Image

3 Develop communities utilizing the rich nature

- Ensure transportation access through AI on-demand transportation
- Create workplaces that utilizes existing stock, and provision of lifestyle support services using cutting-edge technologies
- Experience the rich nature by town planning, promoting workcations and multi-habitation

Future vision of nature-rich foothills Image

1 Urban development linked to transportation infrastructure

- Reinforcement of road network functions and roadside community development
- Enhancement of the transportation network and community building along the rail line
- Strengthening of airport and port functions

2 Urban planning to create rich urban spaces

- Creation of comfortable and attractive spaces for people
- Urban development using bicycles, water transportation, new mobility, and air mobility

1 Urban Development in the Greater Osaka Bay Area

- Community development utilizing diverse local resources and stock
- Improvement of circulation by marine transportation, bicycles

3 Town development utilizing the natural resources of the surrounding mountains

- Networking of natural resources, historical and cultural resources, scenic viewpoint
- Improvement of attractiveness by utilizing private sector's ideas and know-how
