The Kansai region has been a significant part of Japan's history since ancient times, serving for many centuries as the nation's political, economic and cultural center. Today, Kansai continues to thrive as a dynamic region, home to an array of companies, from traditional manufacturers to cutting-edge technology industries, boasting an economy second only to the Tokyo metropolitan area. Visitors from across Japan and around the world are drawn to Kansai's unique cities, including Osaka, the largest in western Japan; the bustling port of Kobe; and Kyoto and Nara, both renowned for their rich historical heritage.

Nobuo Kobayashi, head of the Osaka Research Center for Industry and the Economy, a think tank under the Osaka prefectural government, emphasizes, "Osaka Prefecture's economy is characterized by a well-balanced industrial structure, spanning from manufacturing to services, which is one of its key strengths." The breadth of manufacturing businesses operating in Osaka Prefecture is unparalleled in Japan, he notes. The extensive collection of

metropolitan area, allowing businesses to keep their operational costs in check while offering a comfortable lifestyle for employees. In the suburban areas of Kansai, vibrant restaurant districts offer a wide variety of dishes, while cultural heritage sites, including world-famous temples and shrines, and beautiful mountains, seas, rivers and lakes provide ample opportunities for leisure--another key attraction of the region.

For businesses looking to expand into the Kansai region but unsure where to turn, the Osaka Business and Investment Center (O-BIC) is the go-to resource for help and advice. Between fiscal 2001 and fiscal 2023, O-BIC assisted in attracting 678 foreign companies to Kansai. The center provides guidance on establishing a business, as well as supplies information on office spaces and residences, while also offering advice on government subsidies. Inquiries can be made at +81-6-6944-6298 or via its website (<https://o-bic.net/>).

Welcome to Osaka and the Kansai Region!

companies clustered in the region creates an environment that fosters collaboration among them.

The Kansai region, particularly Osaka, also hosts numerous service providers, including specialist trading houses, software development companies, and design and internet-related businesses, as well as accounting and management consulting firms. This diverse range of services creates a favorable environment that supports corporate activities.

Furthermore, the Kansai region is home to research and development centers for leading Japanese universities and companies, including Kyoto University, a global leader in induced pluripotent stem (iPS) cell research, Osaka University and Kobe University. Their presence offers extensive opportunities for industry-academia collaboration and joint development across a broad selection of fields, including life sciences and biomedical research.

A number of companies have chosen to expand into the Kansai region due to lower office rents, labor costs and living expenses compared with the Tokyo

The 2025 World Exposition (Expo 2025 Osaka, Kansai, Japan) will take place on Yumeshima, an artificial island in Osaka Bay, from April 13 to October 13, 2025. Several hundred companies, including many from the Kansai region, are planning to participate, rotating weekly to showcase their expertise at booths and host events.

In addition to the companies running exhibition booths at Expo 2025, the Kansai region hosts numerous businesses with innovative technologies. In the carbon-neutral sector, one company produces high-strength eco-friendly plastics from scallop shells. The life sciences field includes a company engaged in research and development on health check methods using hair samples collected from beauty salons. Additionally, a startup spun off from an automotive engine parts manufacturer is applying its precision processing technology to the development of medical devices.

We hope you will experience the charm of Kansai firsthand, not only by touring the Expo venue but also by visiting local companies, attending exhibition events and business meetings, and exploring sightseeing spots, with this brochure in hand.

Osaka: A City of Free Spirits

Interview with
TORII Shingo,
Chairperson of the Osaka Chamber of
Commerce and Industry (OCCI)

Special Interviews

We speak with the chairperson of the OCCI and The OCCI chief discusses the while the Expo representative highlights

Q: How would you describe Osaka?

With a history as the "capital of merchants" for over 400 years, Osaka is renowned as a business hub. What sets Osaka's industry apart is its relative freedom from political and administrative influence, creating a liberal and open environment where businesspeople engage in trade, taking on responsibilities themselves. This self-reliant approach, combined with a strong sense of hospitality and a local culture of close, direct communication, makes Osaka a particularly welcoming and business-friendly destination for international visitors.

Q: What distinguishes the business landscape of Osaka?

In Tokyo, around 60% of businesses are large corporations, while the remaining 40% are small and medium-sized enterprises (SMEs). In Osaka, the situation is reversed: almost 60% of companies are SMEs, making Osaka a city fundamentally supported by smaller businesses. Many companies here are involved in manufacturing and are owner-managed. Some possess rare technologies and command up to 90% global market shares in specialized sectors. There are also the bluest of blue-chip artisan manufacturing companies achieving impressive operating profit margins of 20% or even 30%. Success for such companies is driven by presidents who are deeply passionate about technological innovation. Additionally, since many Osaka businesses are owner-managed, company presidents often maintain close ties with employees and are strongly committed to human resource development.

Q: Are Osaka's businesses especially focused on craftsmanship?

A defining characteristic of Osaka's artisan manufacturing companies is their enduring free spirit and openness, centered on businesspeople, a tradition that has continued for over 400 years. When faced with customer requests, they never respond with, "I can't do that." Instead, they embrace even seemingly insurmountable challenges, striving to find solutions and building trust by fulfilling their responsibilities. Beyond their hospitality, Osaka merchants embody a "fighting spirit." I sense an indomitable

spirit in Osaka people's history, a resilience that aligns with the demands of business.

Q: Could you share some exhibition plans for Expo 2025?

The Expo will showcase Nest for Reborn, an exhibition project for the Osaka Healthcare Pavilion. We've been preparing for this event for five or six years, collaborating with various stakeholders since the previous chairperson's tenure. I'm particularly excited about the "dream-inspiring technologies" that will be featured, innovations that may not have immediate applications but open up new possibilities. For example, there will be "photosynthesizing clothing," in which plants are incorporated into fabric. Another innovative concept, the "wellness office," reimagines the workplace as a contributor to health by developing and incorporating a device that can measure health indicators such as blood sugar and blood pressure easily and contact-free. There will also be a "flying truck" airship designed to transport thinned wood from mountainous regions inaccessible to vehicles. Such bold technological challenges foster growth for all involved.

Q: Could you elaborate on your efforts to attract foreign companies to Osaka?

In 2023, the OCCI, along with business associations from the member countries of the Association of Southeast Asian Nations (ASEAN), launched the ASEAN-Japan Business Promotion Platform to further expand business and strengthen economic ties between Japan and ASEAN. To emphasize the importance of these exchanges, I have personally met with the heads of chambers of commerce and industry from six ASEAN countries. During Expo 2025, I will take part in an inaugural in-person round table with my counterparts from ASEAN countries. The Expo will be a valuable opportunity to welcome international visitors to Osaka and other parts of Japan, fostering exchanges, including among corporate executives. Additionally, we aim to strengthen our links with Japan-based chambers of commerce and industry from partner countries in the Group of Seven (G-7) club. I believe Expo 2025 presents an exceptional chance to accelerate such exchanges.

the point person behind Expo 2025 Osaka, Kansai, Japan. latest industrial trends in Osaka, the event's most anticipated features.

Q: Could you explain the theme of the Expo, "Designing Future Society for Our Lives"?

Osaka was chosen as the host for Expo 2025 in November 2018. Since then, major global events such as the COVID-19 pandemic have underscored to everyone the significance of life. These developments have also highlighted the need to bridge divisions in our increasingly fragmented world. In response, we have built the Expo around the idea of "reconnecting the world and its people." This theme is embodied in the venue's design, notably the Grand Ring, which both physically and symbolically connects different parts of the site. Within this expansive structure, participating countries will have the chance to present comprehensive portrayals of themselves over the course of six months under the theme, "Designing Future Society for Our Lives." Each country will essentially say, "This is who we are as a nation" or "This is how our nation's science and technology, culture, history, and society have developed."

Q: How is Japanese technology being utilized at the Expo?

One of the most remarkable displays of Japanese technology will be an artificial heart that beats like a real heart, created with induced pluripotent stem (iPS) cells. This is a breakthrough made possible by collaboration between university researchers and businesses. Another standout is the Grand Ring, a symbol of the Expo, which will be one of the world's largest wooden structures when completed, spanning a circumference of about 2 kilometers. This iconic structure uses the traditional Japanese construction technique known as "nukikoho," which relies on intricate timber joints instead of nails, as seen in shrines and temples, adapted for a modern context. I'm certain that the Expo will offer a unique opportunity to experience such extraordinary Japanese technologies firsthand.

Q: What business opportunities will be available to overseas companies?

At the upcoming Expo, we are introducing an initiative called "Theme Weeks." During the "Health and Well-Being" week, for example, there are plans to hold a medical equipment trade show called "Japan Health," similar to Dubai's Arab Health, at an international site near the Expo venue. In addition, Japan's Ministry of Economy, Trade and Industry, along with organizations such as the Japan External Trade Organization (JETRO), will provide a variety of business-matching opportunities, including exhibitions and industry-specific meetings, in an effort to facilitate active business interactions between Japanese and foreign companies. Visiting business leaders will also have chances to experience the Kansai region's rich culinary culture and tourist attractions. Furthermore, over 400 companies are expected to take part in the Osaka Healthcare Pavilion, a project led by local governments and economic organizations in Osaka Prefecture, offering lucrative possibilities that I believe will win the interest of foreign companies.

Q: Do you have a message for overseas businesspeople?

First held in London in 1851, the Expo began as an industrial fair primarily showcasing products. It was a business opportunity. Today, trade shows have become increasingly specialized, competing to highlight cutting-edge technologies. Still, I think that attending trade fairs alone doesn't always offer a complete picture of technological advances. Science and technology do not exist in isolation; they are shaped by human experience. The Expo is unique in its ability to present both the latest innovations and visions for future human society. Through Expo 2025, we also hope to demonstrate how science and technology have supported us in economic terms. I encourage you to use this opportunity as a gateway to connect with Japanese business leaders and engage with Japanese companies. We sincerely look forward to welcoming you.

01

StemRIM Inc.

Corporate Profile

StemRIM Inc. is a biotechnology company focused on developing Regeneration-Inducing Medicine™. This innovative technology employs a unique mechanism that addresses the limitations of conventional cell therapy and regenerative medicine. It enhances tissue regeneration by boosting the supply of stem cells, which are essential for tissue regeneration capacity. The administration of Regeneration-Inducing Medicine releases mesenchymal stem cells from the bone marrow into the peripheral bloodstream, increasing the overall circulation of stem cells in the body. This process facilitates the accumulation of stem cells in damaged tissues, thereby accelerating tissue reconstruction. StemRIM is currently conducting clinical trials for a variety of diseases, including dystrophic epidermolysis bullosa and acute ischemic stroke, attracting significant attention in the medical community.

VisGene, Ltd.

Corporate Profile

VisGene, Ltd. is a bio-venture company centered on genetic analysis technology, originating from Sanken, previously known as the Institute of Scientific and Industrial Research, at Osaka University. Guided by the principles of “miru” (see), “shiru” (learn), and “kaeru” (change), the company is dedicated to enhancing people’s lives through the visualization of microorganisms and genes. VisGene provides products and services aimed at addressing social challenges by leveraging a variety of advanced technologies. These include rapid testing technologies for infectious diseases, such as dengue and COVID-19; solutions that promote healthy longevity through the analysis of genetic disorders and bacteria linked to periodontal disease; technologies focused on analyzing bacterial flora to tackle health issues unique to women; and methods for the quick detection of alcohol in saliva and breast milk.

IMMUNOSENS CO., LTD.

Corporate Profile

IMMUNOSENS CO., LTD. is a startup emerging from Osaka University, focused on developing a small, highly sensitive rapid point-of-care testing (POCT) device utilizing its proprietary electrochemical immunoassay method known as GLEIA. By combining immune response and electrochemistry, GLEIA enables the creation of a POCT device that is more sensitive, faster, simpler and more cost-effective than traditional immunoassay methods. The company’s vision is to allow “rapid medical-grade tests for anyone, anytime, anywhere,” fostering a world where individuals can lead long and healthy lives. The aim is the early detection of health issues and diseases across a range of contexts, from disease prevention to diagnosis and prognosis management.

MATRIXOME, Inc.

Corporate Profile

MATRIXOME, Inc. develops and sells cell culture substratum products based on research conducted at the Division for Matrixome Research and Application at Osaka University's Institute for Protein Research. The term "matrixome" describes the comprehensive interactions between cells and their extracellular environments, which significantly influence cellular fate in living organisms. Leveraging its research and development capabilities, the company aims to contribute to advances in regenerative medicine and microphysiological systems (MPS).

Katsujukai Memorial Clinic

Corporate Profile

Katsujukai is a medical corporation operating 15 clinics across Japan that specialize in regenerative medicine. As of August 2024, the group had handled a total of more than 36,000 cases of joint treatment. In particular, Katsujukai Memorial Clinic, in the Nakanoshima district of the city of Osaka, aims to help people live long lives in good health, as it fights aging by utilizing medical solutions relating to whole-body health based on its innovative cell therapy and state-of-the-art regenerative medicine technologies. Utilizing its excellent location at the Nakanoshima Gross medical complex, the clinic offers treatment with awareness of its role as an international medical facility. By strengthening cooperation with medical institutions and research laboratories around the world and sharing the latest technologies and research results with them, the clinic is resolved to improve the quality of its medical care and realize treatment from a global perspective.

**I.B CO., LTD.**

Corporate Profile

After starting as a trader exporting fresh food and grain produced in Japan and importing products such as food materials from overseas, I.B now mainly produces and sells in-vitro diagnostic agents for animals. It primarily promotes livestock farming and health management for beef cattle and dairy cows, while also making efforts to realize and spread preventive and remote medical care for such animals. The firm aims to help livestock farmers and large animal veterinarians in Japan work in sustainable ways and boost their profits.

**FUKUSHIMA GALLILEI CO. LTD**

Corporate Profile

FUKUSHIMA GALILEI was the first in the industry to standardize commercial refrigerators in Japan. With temperature-control technology as its core, the firm continued to support food infrastructure as supermarkets took root in postwar society and the food service industry expanded. It manufactures products including commercial refrigerators, refrigerated display cabinets, and medical, science and chemical instruments, and also handles food factory and large warehouse engineering. In addition, the firm offers maintenance services for these products, along with temperature and hygiene management systems. Looking toward 2051, the company is making efforts to achieve net-zero greenhouse gas emissions under its "Dramatic Future 2050" environmental vision.

**Nissin FULFIL**

Corporate Profile

Nissin FULFIL Co., Ltd. is a startup spun off from Nissin Manufacturing Co., Ltd., an automobile engine parts manufacturer. Leveraging its parent's expertise in precision component processing technologies, Nissin FULFIL develops innovative composite bone processing machinery for medical applications, allowing bone screws to be crafted from a patient's own bone during surgery. This breakthrough enables real-time processing of bone into screws in the operating room, reducing the need for multiple surgeries and promoting faster patient recovery. Through the development of medical devices, Nissin FULFIL aims to address the health care needs of people both in Japan and around the world.

Osaka Heat Cool Inc.

Corporate Profile

Osaka Heat Cool Inc. was established mainly by university teachers to develop health care equipment based on hot and cold sensations utilizing Peltier devices. Although it is difficult to reproduce hot and cold sensations in particular, startup was the first to develop a related device that is compact and lightweight. Transmitting hot and cold sensations simultaneously makes it possible to reproduce a stimulus similar to scratching, and the company is advancing research with the top priority on using its technology to suppress itching. The company also reproduces a menstrual pain experience using electrical stimulation and develops toys for children with disabilities.

Sakurabashi Watanabe Advanced Healthcare Hospital

Corporate Profile

Sakurabashi Watanabe Advanced Healthcare Hospital relocated to Nakanoshima Qross, a medical complex in Osaka's Nakanoshima area, in April 2024. Equipped with the latest medical technology, the hospital continues to provide 24/7 cardiovascular tertiary emergency services. Along with advanced percutaneous coronary intervention (PCI) and arrhythmia treatment, the hospital offers open-chest surgeries, including open-heart procedures, as well as minimally invasive procedures, such as transcatheter aortic valve implantation (TAVI), in hybrid operating rooms. The facility also delivers high-precision imaging diagnostics using state-of-the-art CT and MRI technologies, enabling more accurate medical care. In addition, the hospital is actively involved in regenerative medicine, expanding its range of treatments by exploring innovations such as myocardial sheet technology.

At Co., Ltd.

Corporate Profile

At Co., Ltd. is a health technology startup originating from Osaka University, specializing in the development and manufacture of nailfold capillaroscopy (NFC). The company's proprietary capillary image analysis technology provides a system that facilitates easy health check-ups. Through joint research with government-affiliated research institute RIKEN, At Co. has patented a mechanism that integrates this system with blood tests. Additionally, in collaboration with Tohoku University, the company published research findings demonstrating that NFC is effective in detecting diabetic retinopathy. At Co. also offers a clinical testing service for health foods, serving a diverse clientele that includes universities, pharmaceutical companies, pharmacies, fitness centers and beauty salons. The company is actively recruiting local sales agencies in countries around the world.

PITTAN Inc.

Corporate Profile

The health-tech startup specializes in analyzing sweat composition to provide insights into an individual's nutritional state to help him or her make better health decisions. Under the concept of "Technical Pop," the company has implemented highly credible science-based technologies into accessible health care services. Specifically, the company employs a noninvasive method to collect extremely small amounts of sweat easily and provides analysis results in 15 minutes on the spot using a portable analyzing device that utilizes a microfluidic device technology. It aims to analyze sweat data for all human beings, thereby contributing to solving healthcare problems for mankind.

oneA Co.,Ltd.

Corporate Profile

The company has diverse operations, including metal cutting and processing, industrial LED lighting equipment, and amusement equipment. Also running a wellness business, it will showcase at Expo 2025 the "Sleeim" wearable device for snoring and apnea syndrome. When it detects snoring or apnea, Sleeim provides gentle vibratory stimulation to the wearer to induce natural breathing.

Osaka Expo 2025

04

Tellme Solutions Co.,Ltd.

Corporate Profile

Founded in 1930, the company is a time-honored beauty salon operator. As part of efforts to retain customers, it has conducted research and development for "disease risk assessment using hair as a biological sample." Unlike body fluids such as blood and urine, "collecting, transporting and storing" is easy for hair, while power sources or devices are not necessary for hair sample handling. The technique can thus be accessed even in areas or countries where medical services are not widely available, such as remote islands or mountainous locations, and is therefore unique. Evidence from the firm's hair analysis will be announced at the IDF World Diabetes Congress 2025 in Bangkok in April. The company has already conducted demonstration tests in municipalities in Osaka Prefecture, confirming that the technique is effective for making people who are indifferent to health in particular aware of the need of health promotion. The service is expected to make contributions to the third U.N. sustainable development goal of "good health and well-being."

Mirai Innovation Research Institute

Corporate Profile

The company focuses on research and development for advanced technologies and the supply of educational programs. Its R&D activities cover a wide range of fields, including robotics, neurotechnology, AI, blockchain, big data analysis, VR/AR, bioprinting, nanotechnology, and space technology. At Expo 2025, the company plans to provide, using its VR technology, a relaxing space in line with the cognitive state recognized from brain waves.

Morecosmetics Co., Ltd.

Corporate Profile

Haircare and skincare cosmetics maker Morecosmetics Co., Ltd. develops its products based on scientific evidence, giving the highest priority to minimizing burdens on the skin. It sells products via beauty salons and medical institutions so that people with skin issues and damaged hair can use them without worry. The company's sophisticated research and development capabilities have been highly evaluated. One of the firm's research papers has been published in a journal of the American Oil Chemists' Society, while it has won the "Editor's Award" from the Japanese Cosmetic Science Society. The company plans to offer its Badens Scalp Shampoo as a hand-washing detergent at Expo 2025 and exhibit its products at the Osaka Healthcare Pavilion at the event.

PaMeLa Inc.

Corporate Profile

A startup from Osaka University, PaMeLa Inc. develops AI that quantifies pain levels. At present, there is no objective way to assess pain, so medical institutions have no choice for treatments but to rely on subjective evaluation, such as self-reporting from patients. As a result, pain cannot be evaluated correctly in clinical settings, with social issues emerging such as pain management ending in failure and pain becoming chronic. Based on large amounts of clinical data, the company is developing AI that quantifies pain in real time and with high accuracy on a scale of zero to 100. The firm has already completed exploratory clinical trials on the technology with a university hospital in Japan and is now in the phase of confirmatory clinical trials. In future, with the market introduction of the technology, the company aims to help solve social issues associated with pain.

Koushi Chemical Industry Co., Ltd.
(A CDC-supporting company)

Corporate Profile

Koushi Chemical Industry transforms discarded scallop shells into eco-friendly "SHELLMET" helmets, utilizing ecoplastics derived from the shells. This innovation reduces carbon dioxide (CO₂) emissions by approximately 36% compared with traditional materials. The helmet's design incorporates a unique rib structure inspired by scallop anatomy, resulting in about 33% greater strength than conventional helmets. Damaged Hotamet helmets are also recyclable, either into new helmets or for use as building materials. By upcycling seashells, which previously contributed to around 40,000 tons of marine waste annually, the company is reducing industrial waste and helping preserve the seaside scenery of Sarufutsu, a village in Hokkaido famous for its large scallop harvests.

Photo-on-Demand Chemical Co., Ltd.

Corporate Profile

Photo-on-Demand Chemical Co., Ltd. is a startup that uses methane--a main component of biogas generated from sewage, livestock manure and garbage--chlorine generated from the electrolysis of seawater, and oxygen contained in the air as raw materials to produce active pharmaceutical ingredients and intermediates using light. Methane is a greenhouse gas with a global warming potential approximately 25 times greater than that of carbon dioxide, and there is a strong need to reduce emissions of it into the atmosphere. The company manufactures and sells high-value-added chemical products using biogas as a raw material, employing its patented manufacturing method, which is safe, inexpensive, simple, and environmentally friendly. The startup aims to contribute to U.N. sustainable development goals by forming a hub for manufacturing using light under an industry-government-academic-finance consortium.

spicecube.inc

Corporate Profile

Indoor agriculture, which does not require farmland, can solve many challenges, including low food self-sufficiency caused by the declining agricultural population, and spicecube.inc's business model is not just building plant factories but also support the distribution of related products. The company can help farmers distribute products at their desired prices, which is most important for agricultural businesses. It is developing a system that allows indoor vegetables to absorb carbon dioxide emitted from offices and homes, while believing that indoor farming can also contribute to reducing carbon dioxide emissions by using LED lighting and cultivation technology that circulates nutrient solution.

Carbon Neutrality

Microwave Chemical Co., Ltd.

Corporate Profile

Microwave Chemical Co., Ltd. has developed a technological platform for the use of microwaves. It develops and provides technologies to improve energy efficiency and reduce carbon dioxide emissions through microwave processes in a range of industrial fields including chemicals, steel, and metal smelting. At present, joint development projects are underway with more than 60 Japanese and foreign companies. Microwave Chemical is working to achieve carbon neutrality in the industrial domain through microwaves.

LEP Inc.

Corporate Profile

Inspired by luminous organisms in nature, such as fireflies and mushrooms, LEP Inc. is conducting research and development on plants that have "bright luminescent proteins." We aim to develop "light emitting flowers" and "light emitting ornamental plants" for use as interior accessories, as well as "light emitting roadside trees" that can replace street lights. If realized, such "light emitting plants" will absorb CO2 through photosynthesis during the daytime, and at night light rooms and streets, like conventional illumination but without the use of electricity. They could be the ultimate eco-friendly lighting and therefore a critical key to resolving global warming and energy-related issues.

Renaissance Energy Research Corporation

Corporate Profile

Renaissance Energy Research was established with the aim of developing businesses across a wide range of areas using catalyst-related technologies developed by founder Osamu Okada during his previous job, at Osaka Gas Co. Having obtaining rights from the earlier employer to manufacture, sell, and license related patents, Renaissance Energy Research sells catalysts for hydrogen production to chemical and oil companies in Japan and abroad. It also promotes applications of a carbon-dioxide selective permeable membrane developed in cooperation with Kobe University for carbon-dioxide separation and recovery. The membrane system developed by the company makes it possible to improve the efficiency, reduce the size and lower the cost of hydrogen stations. The company aims to promote application of the system to various fields, such as power generation exhaust gas, biogas and DAC (Direct Air Capture). Meanwhile, it has successfully developed a carbon-dioxide methanation catalyst with excellent low-temperature activity. It plans to advance the development of recycling technology for carbon dioxide recovered by membrane separation to contribute to the realization of a decarbonized society.

Fujikin Incorporated

Corporate Profile

Fujikin Incorporated engages primarily in the manufacture of fluid control systems, with focus on specialized valve equipment used across various industries. In particular, the company holds a leading market share globally for valves that regulate gas flows in semiconductor manufacturing equipment, according to its internal research. Fujikin is also actively developing products in the hydrogen sector, recognized as a promising next-generation energy. Fujikin Carp Group has a significant international presence, with operations in Japan, the United States, Ireland, Germany, South Korea, Vietnam, China, Taiwan, and Singapore. In addition, the company is committed to sustainability initiatives, including the farming of sturgeon, a species classified as endangered.

REX INDUSTRIES CO.,LTD

Corporate Profile

REX INDUSTRIES CO., LTD. works to contribute to the world through its innovative piping technologies that support vital infrastructure, exporting its products to approximately 80 countries. The company has established production or sales bases in the United States, China, Thailand and India. In addition to its traditional pipe-threading technologies, REX's product lineup features roll-threading machinery tailored for the Japanese market and fusion equipment essential for manufacturing polyethylene pipes, known for their earthquake resistance. Furthermore, the company's water treatment and conservation systems are utilized in both domestic water applications and aquaculture, addressing a variety of challenges. Also, REX's horse and amenity business division manufactures all-weather horse sand and sells feed, positioning the company as the only provider of such products in Japan.

Kuboi Ink Co.,Ltd

Corporate Profile

Kuboi Ink Co., Ltd. is a leading manufacturer of ultraviolet curable inks and functional printing inks, ranked as the second-largest producer of seal label printing inks in Japan, with an 11% market share. The company is renowned for its advanced anti-counterfeit technologies, boasting a remarkable 99% market share in anti-counterfeit inks specifically designed to prevent color copies of residence certificates and seal registration certificates in Japan. In addition, Kuboi Ink produces inks for electronic components and engages in the printing of fragrances. The company has earned recognition from the Japanese government as one of the "Companies Driving Regional Growth" and is listed among 300 promising small and medium-sized enterprises. Kuboi Ink is dedicated to upholding high standards in quality, environmental sustainability and personal information protection, earning ISO9001, ISO14001, and PrivacyMark certifications.

Kanai Juyo Kogyo Co.,Ltd

Corporate Profile

Founded in 1894, Kanai Juyo Kogyo Co., Ltd. is a B2B manufacturer specializing in metals and chemicals, with a rich history in the Kansai region of western Japan. The company operates two main divisions: its textile machinery business, based in Itami, which processes metal wires and is recognized as domestic market leader; and its non-woven fabric operations in Takarazuka, one of Japan's four pioneering businesses in this field. With over 80% of its sales generated from international markets, the textile machinery division boasts strong global brand recognition and power. The non-woven fabric division produces materials used in various applications, including filters for air conditioning systems in buildings, ceiling materials for automobiles, and medical devices. The company places a high priority on human resource recruitment and development, adopting a unique approach that emphasizes innovative recruitment practices rather than traditional methods.

Torishima Pump Mfg. Co., Ltd.

Corporate Profile

Torishima Pump Mfg. Co., Ltd. is a specialized pump manufacturer based in Osaka Prefecture and founded in 1919. It has strengths in pumps for water supply and sewerage facilities, power plants, and seawater desalination plants. The Japanese Ministry of Economy, Trade and Industry has selected Torishima Pump as one of its Global Niche Top Companies. In recent years, when heavy rains have caused extensive damage across Japan, the company has helped to making life safe and secure through its disaster prevention and mitigation technologies. It also contributes to reducing power consumption and carbon dioxide emissions by improving pump efficiency. In addition, it has been developing pumps for next-generation energy, successfully testing the world's first large-flow liquefied hydrogen pump.

Plus Co.,Ltd.

Corporate Profile

The main line of business for Plus Co., Ltd. is the production and sale of its signature “turalist” toothbrushes, which are sustainable, nondisposable and entirely plastic-free. The eco-friendly toothbrushes are manufactured in Japan with responsibly sourced natural materials. The handles are crafted from beech wood chips, a byproduct of chair manufacturing, while the bristles are made primarily from horsehair, sourced from animals raised for food.

Key Milestones: Oct. 2021: Successfully reached its crowdfunding target.
Feb. 2023: Flagship product certified as a Made-in-Osaka brand.
Oct. 2023: Flagship product listed among the recommended local products for the Group of Seven (G-7) Trade Ministers’ Meeting in Osaka and Sakai.
Dec. 2023: Flagship product received Special Award from the Ministry of the Environment’s Good Life Award Executive Committee.

DG TAKANO Co.,Ltd.

Corporate Profile

With a mission to “save the world’s water,” DG TAKANO Co., Ltd. developed in 2009 the Bubble90 nozzle for industrial use, which can reduce water consumption by up to 95%. In 2023, the company introduced “meliordesign,” the world’s first* tableware that can remove dirt with water alone, utilizing advanced surface modification technology powered by nanotechnology. These innovations demonstrate the company’s commitment to solving global water shortages. Currently, the company is working to develop new infrastructure that addresses not only water scarcity but also food shortages and energy-related issues through integrated solutions.

(*The “world’s first” claim is based on DG TAKANO’s research, with a patent pending as of June 2023.)

HCI CO.,LTD

Corporate Profile

HCI CO., LTD. specializes in robotics and AI technologies, providing robotic systems and AI solutions across various industrial sectors. The company’s strength lies in its ability to offer comprehensive one-stop services, from the development of robots and AI robotic systems to delivery and operational support, leveraging advanced technological capabilities honed over many years. Notably, HCI operates a unique employee cafeteria that is fully managed by robots and AI, the first of its kind in the world. This innovative facility not only showcases the company’s technological prowess but also makes important contributions to the local community.

CHINOUGIJUTSU CO.,LTD.

Corporate Profile

Chino Ugijutsu Co., Ltd. is working to solve various social challenges by making full use of AI and robot technologies. It is developing robots for a range of purposes, including construction, firefighting, warehouse transportation and plant inspection, as well as automatic driving using generated AI, detection sensors for aging facilities, and AI for recognizing human actions. In particular, the company's strength is its ability to combine AI and robot technology to address dangerous and harsh working conditions and labor shortages at construction sites, fire sites, factories and warehouses, as well as on ships. Top-level universities and companies around the world are paying attention to the company's advanced technological capabilities.

Thinker Inc.

Corporate Profile

Thinker, a startup from Osaka University, develops and sells pre-touch sensors, a next-generation product that detects the distance and inclination of an object to be grasped just before touching it. By using such a sensor, the fingertips of a robot hand are able to "explore and grasp" an object as if they are moving it. The company is working to spread the use of robot hands, previously limited to some big companies because of the need for large-scale facilities.

Komi-Hakko Corporation

Corporate Profile

Komi-Hakko Corporation, a start-up company that originated in Osaka University, has developed and implemented a groundbreaking technology for quantifying odors. The technology overcomes the lack of defined odor quantification. The company provides a wide range of solutions for accurate odor analysis and recording. Komi-Hakko also has built an odor database which is used to reconstruct odors for transferring smells (called smell codes). This technology allows delivery of scents worldwide as well as in virtual spaces. In addition, the company built foul odor database, which is leveraging for deodorant development.

Innoqua Inc.

Corporate Profile

Under a guiding philosophy of "Continue to Watch the Nature We Love," Innoqua Inc. is dedicated to research and development for its proprietary Environmental Transfer Technology™. This reproduces diverse ecosystems in aquariums by combining the breeding expertise of aquarists with research methodologies. Building on this innovation, the company aims to "expand human possibilities and create a harmonious world where both people and nature can thrive." By recreating natural environments in controlled aquatic settings, Innoqua supports research projects that enable the study of various water ecosystems without the need for fieldwork, including in waterfront environments. The company also engages in educational initiatives aimed at raising awareness about the beauty and significance of marine life.

E • C • R CORPORATION

Corporate Profile

E C E R Corporation utilizes drones to inspect and repair infrastructure such as roads, bridges, ports, levees and seawalls. The unmanned aerial vehicles allow for the early detection of deterioration, enabling timely repairs and effective preventive maintenance. The company's Hien drone, fitted with specialized spraying equipment, applies various maintenance materials, such as concrete solidification agents, modification materials, and paint, to concrete and steel structures, utilizing different types of nozzles tailored for specific materials. This enables access to hard-to-reach areas, including the undersides and sides of structures, offering a feasible solution for maintenance tasks in locations where scaffolding or bucket vehicles are impractical. The technology facilitates comprehensive infrastructure maintenance.

ReallImage Inc

Corporate Profile

ReallImage Inc. develops glasses-free 3D displays that offer eye friendly, high realism, superior image quality, and wide viewing angles. Compared with head-mounted displays, these 3D displays cause less visual discomfort and fatigue, making them easier to use. The displays can present 3D content in real time, whether generated through computer graphics or captured by cameras, making them suitable for a variety of applications including in education, entertainment, simulators, construction and medical fields. Founded in 2023, the company draws on over 30 years of technological and business experience from its core team. It has also been recognized as a venture originating from both Osaka Metropolitan University and Tokyo Institute of Technology, now part of Institute of Science Tokyo.

SHIN-MEN TEKKO Co. Ltd

Corporate Profile

SHIN-MEN TEKKO Co. Ltd. has strengths in anti-corrosion treatment for large steel structures, including bridges, plant equipment and industrial machinery. Operating under the motto "Preventing Corrosion for 100 Years," the company provides comprehensive anti-corrosion solutions, from surface blasting to thermal spraying and painting. In recent years, SHIN-MEN TEKKO has enhanced surface preparation efficiency through laser technology and introduced its own laser-processed products. Leveraging its advanced technological capabilities, the company has secured contracts with major clients, such as bridge construction companies, large theme parks and aerospace organizations, achieving significant accomplishments. Including its headquarters, the company operates four plants, located in Osaka, Hyogo and Toyama prefectures, which can accommodate large structures weighing up to 18 tons and measuring as much as 17 meters. SHIN-MEN TEKKO also offers on-site treatment services.

Tokai Spring industries Inc.

Corporate Profile

Tokai Spring Industries Inc. is a manufacturer specializing in high-quality metal springs, particularly custom special springs. With over 40 years of experience in utilizing IT to develop its own production systems, the company excels in producing a wide variety of high-quality springs in small quantities, including as few as one to five units. The company is equipped to manufacture all types of metal springs, including the largest in the world, and consistently maintains a stock of special steel materials, including nickel-based alloys, titanium alloys and copper materials. Tokai Spring is well regarded for its design proposal and development capabilities, with its springs highly valued for their quality and performance. Notably, its products have been used in prominent structures, such as the Tokyo Skytree, and H-3 space rockets.

Hutzper Inc.

Corporate Profile

Hutzper Inc. aims to work with clients as a partner for manufacturing industry in the field of digital transformation (DX) technologies that help to solve issues facing the sector, such as automation and labor-saving, and to provide AI that is truly useful on site. The company's strengths are enabling clients to introduce its services easily at prices that help them recover their investments early, making proposals that take the whole manufacturing process into account, and offering services as a tool that is truly helpful on site. Hutzper has developed advanced technologies that are truly valuable at manufacturing sites, based on insights gained from visiting more than 1,000 companies since its foundation. The company hopes to make contributions to the sustainable development of manufacturing industry, such as helping to make factories smarter, by supplying services capable of supporting clients from a variety of angles, including visual inspection AI.

Nissin Seal Industry Co., Ltd.

Corporate Profile

Manufacturing flexible packages is the main business area of Nissin Seal Industry Co., Ltd. The firm has introduced state-of-the-art printing and pouch-making machines, and provides technology for high-quality printing and a range of manufacturing and processing technologies for pouches. In particular, it has a printing machine capable of employing up to 11 colors for gravure printing. It can also reproduce delicate designs and photographic images. For pouches, the company has an array of equipment and technologies, such as BXP machines, to make special products including spouts and shaped pouches, so it can offer optimal packages that meet a variety of customer needs. Moreover, the company is actively working to reduce environmental burdens by offering products that conform to the green purchasing law as well as items using biomass films and inks, introducing volatile organic compound (VOC) treatment equipment and cutting the amount of waste.

KUMONOS Co., Ltd.

Corporate Profile

KUMONOS Co., Ltd.'s proprietary "KUMONOS" technology, which can detect cracks with a width of 0.2 millimeters from a distance of 100 meters, is the only one of its kind in the world. The high-precision measurement ability of the KUMONOS technology and the firm's "SHIN KUMONOS" system, which also employs high-resolution photography, enable safe and efficient inspections for large buildings, difficult with conventional methods, as well as external walls and other structures, including even those with hazardous conditions and in dangerous areas. Contactless damage measurement and analysis are possible. The company's 3D measurement technology, employing a 3D laser scanner that can collect one million points of point cloud data per second, has been used for a total of about 3,000 projects in Japan and abroad. Experienced technicians from the company analyze every structure three-dimensionally.

Arimitsu Industry Co.,Ltd.

Corporate Profile

Arimitsu Industry Co., Ltd., established in 1923, has core strengths in high-pressure pump technologies, supplying products across a wide range of sectors, from agriculture to industrial applications. In the agricultural field, our innovative House Spray system enables automated spraying of ultra-fine particles as small as 2.5 microns for greenhouse pest controls; set to operate overnight, this system completes unmanned operations for crops and flowers by the next morning. In the industrial field, We offer a diverse range of high-pressure cleaning machines and systems designed to meet the cleaning demands of various sectors. Additionally, with increasing concerns over global warming, our fine mist cooling systems have also gained popularity as an effective solution for summer heat.

KiwaChemical CO.,LTD

Corporate Profile

Kiwa Chemical has two business areas: the development and production of metal surface treatment agents; and sales of industrial chemicals, mainly activated carbon.

The company is a three-time recipient of aid under the Japanese Ministry of Economy, Trade and Industry's Go-Tech, or Growth-oriented SMEs Technology Development Support Grant Program, which is aimed at supporting efforts by small and midsize manufacturers to strengthen research and development capabilities.

It has developed innovative chemicals such as surface treatments for painting that hugely reduce environmental impacts and a lubricant for cold forging that can greatly shorten processes. Kiwa Chemical jointly created an automatic concentration management device that matches IoT, and the device won an award from a local industry bureau as an excellent new product made by a small or midsize manufacturer. In 2025, the company plans to launch a new plant with a floor space of 2,000 square meters in Toyonaka, Osaka Prefecture, aiming to produce 4,000 tons of new types of chemicals per year.

Smileyearth Corporation

Corporate Profile

Smileyearth Corporation operates an award-winning towel factory in Izumisano, Osaka Prefecture, the city known as the birthplace of towel manufacturing in Japan. The company is led by the first skilled craftsman in the towel industry of the Senshu region to receive the Monodzukuri Nippon Grand Award from the Japanese government. Celebrating exceptional contributions to "monodzukuri," or artisan manufacturing, the honor recognized Smileyearth's independent pioneering of a technological innovation that enables towel production with no reliance on chemical agents. This breakthrough helps to reduce river and ocean pollution caused by wastewater from towel factories. Visitors are invited to experience at firsthand the company's "nature towel factory," a facility designed for towel production in harmony with the local natural environment.

Japanese "SHODO" : Extending to the Future ~Sailing over the sky, sea and time~

The five-day exhibition is designed to promote "All-Japan Calligraphy" to the world. Contemporary "shodo" calligraphy works related to the theme of Expo 2025, "Designing Future Society for Our Lives," will be displayed on walls, a "washitsu" Japanese-style room will be reproduced, and "kakejiku" hanging scrolls, "tsuitate" screens and "byobu" folding screens will be exhibited. Meanwhile, state-of-the-art technologies will also be available, with visitors allowed to view the creation process for shodo works via VR technology and experience "air shodo," in which they can write calligraphy by hand without touch as their palm movements are detected and traced by an infrared sensor. In addition, calligraphy-writing and seal-carving sessions featuring highly skilled calligraphers, calligraphy performances by university students, interactive shodo works-viewing events, workshops, and brush- and ink-making demonstrations are scheduled to take place.

Organizers: Japan Calligraphic Art Academy, The Yomiuri Shimbun

OPK2025 Optics & Photonics KANSAI 2025

Optics & Photonics Kansai 2025 Symposium (parallel event) Briefing Session on Research Results by Institute for Laser Technology (parallel event)
Seminar by Japan Society of Applied Physics Photonics Division (parallel event) Other Related Seminars (parallel event)

Optics and photonics technologies are used in a wide variety of situations, but there were few opportunities to access information on photonics in the Kansai region until Optronics Co. launched the Optics & Photonics KANSAI technology exhibition in Osaka in July 2019. Ahead of Expo 2025, interest in science and technology is growing in the Kansai and western Japan regions, with attention focused on the optics and photonics products that are key to virtual reality and the augmented reality and robot technologies that are being introduced in earnest at the event. Optics & Photonics KANSAI, whose exhibitors include key Japanese companies dealing with optics, photonics and image measurement-related equipment, is a valuable platform for users in the Kansai and western Japan regions to experience cutting-edge optics technologies.

Future Monodzukuri International EXPO 2025

The exhibition aims to bring together outstanding products and technologies that support industries, introducing them both domestically and internationally. It also seeks to foster business discussions and networking opportunities through exhibitions and forums. Additionally, the event will highlight the significance of Expo 2025 Osaka, Kansai, Japan, and its positive impact on manufacturing industry.

The exhibition will feature products and cutting-edge technologies that address industry challenges and help shape a brighter future for society. With an international symposium scheduled during the event, the organizers aspire to establish an international trade fair that is a proud showcase for Japan.

Osaka One-Stop Business Service Desk

The Osaka prefectural government, in partnership with the Osaka city government and various support organizations, has set up the Osaka One-Stop Business Service Desk to address business inquiries from overseas promptly and appropriately. The aim is to create opportunities for business exchanges, with a primary focus on companies in Osaka.

The service desk welcomes inquiries from foreign public/private organizations considering hosting business events in, or sending business delegations to, the Osaka area on the occasion of Expo 2025 Osaka, Kansai, Japan.

We encourage foreign public/private agencies to contact us if planning to hold business events or send delegations to Osaka, Kansai on the occasion of EXPO 2025.

Osaka Business and Investment Center (O-BIC)

The Osaka Business and Investment Center (O-BIC) was established in April 2001 through a partnership between the Osaka prefectural government, the Osaka city government, and the Osaka Chamber of Commerce and Industry.

O-BIC serves as a one-stop service center, offering comprehensive support, including essential information and expert advice, to foreign companies, diplomatic missions and economic organizations looking to expand into Osaka. It also assists foreign companies already operating in Japan that are planning to set up a second business base in Osaka.

Concierge Services for Arranging Tours of Small and Medium-Sized Manufacturing Companies

"Osaka Machiju Monozukuri Pavilion" is a portal website offering a full range of information on showrooms across Osaka Prefecture, as well as local factories that welcome visitors for tours. This platform helps showcase the technological capabilities of small and medium-sized manufacturers in the prefecture and the attractions of their products. The service primarily caters to the growing number of visitors expected for Expo 2025.

Visitors to the portal can easily access information on factory tours and apply to visit specific factories that match their interests.

Additionally, dedicated concierges are available to provide tailored support, ensuring that both parties' needs are met efficiently.
